EL GORDO

Very interesting hybrid chosen by the UG team to be one of the first hybrids resistant to Tylc and LSL. Extremely firm large global fruited tomato, average weight 200-250 g, uniform bright green color becoming very intense red at complete ripening. Long harvest season for single pick. Excellent balance between acidity and sugar. EL GORDO thanks to its resistance to Nematodes and virus Tylc is suitable both for green house and open field. Resist./Toll.: **V FF N Bsp Tylc**.

MONTALBAN

This hybrid has been selected by United Genetics research expressly for home garden market. Semi-determined plant, vigorous and with mid-short internodes, good cover. Mid-early harvesting. Global slightly flatted fruit (average weight 250-300 g) fleshy, juicy and tasty. Deep red color at ripening, firm and good shelf life. Resist./Toll.: **V FF Aa**.

ALTAMIRA

Typical hybrid LSL with "RIN" gene suitable to green house cultivation. Mid-early, ideal for red cluster harvesting (5-6 fruits per cluster). Global slightly flattened fruit shape, average weight 130-150 g. Indetermined vigorous plant very high production. Deep red color. Good firmness grants long transport. Resist./Toll.: **V FF N TMV**.

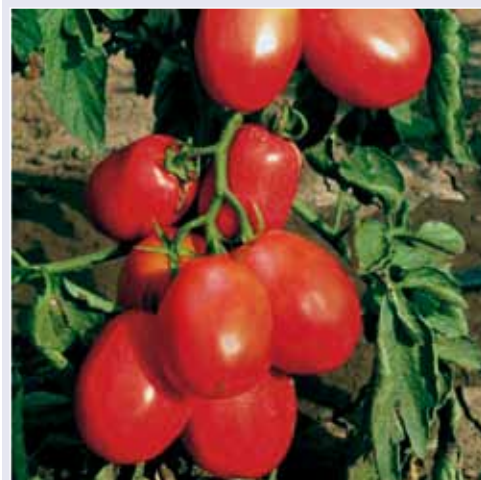

UG 88105

Typical Ox-heart hybrid with indetermined plant, mid vigor, good rusticity and mid-short internodes. Green shoulder fruits, typical shape, slightly ribbed as per its traditional characteristic. Average weight 250-300 g. Excellent yield also on higher clusters. Good tolerance to cracking and good shelf life. Its good performance is due in particular to its good taste and fleshy pulp. Resist./Toll.: **V FF TMV**.

REPOSADO

Hybrid selected for "Saladette" market share. Good vigor, indetermined plant, good foliage cover. Average weight 100-120 g, very firm, juicy, 5-6 fruits per cluster, deep red color at full ripening. Long harvesting. Resist./Toll.: **V FF N Tylc**.

BRAVO

Indetermined plant, "Saladette" type hybrid able to express an excellent yield capability. Very uniform fruits, average weight 120-130 g with excellent firmness and thickness of the walls. BRAVO has demonstrated a very high tolerance to Tylc virus in those areas where the pathogen elements are present. Resist./Toll.: **V FF Tylc**.

UG 3323

Fresh market hybrid tomato for green house cultivation of the “Marmande” type. Ideal for single fruit harvesting, green or turning red. Indetermined vigorous plant, good production capability, classic shape round flattened with evident ribs. Typical color deep green turning to pink-orange red at ripening. Very high organoleptic standards typical of the Marmande class. Good performance also in open field cultivation.

Resist./Toll.: **V FF N**.

SUPERMARZANO

Typical elongated fruit hybrid very appreciated by the San Marzano true taste lovers. Indetermined plant, good vigor and foliage cover. Good uniform fruit production also at upper clusters. Typical elongated fruit shape, medium green color with light green shoulder turning to deep red when ripening. Its rusticity and resistance to Nematodes enable both green house and open field cultivation.

Resist./Toll.: **V FF N TMV**.

MINIMARZANO

This hybrid has the typical shape of the Italian San Marzano tomato but the dimension is “mini”. Fruit weight is 20-25 g. Very sweet taste having a total brix of about 7- 8 degree. Deep red color. Ideal for fresh market, packed in trays, good resistance to over-ripening. Suitable also to Italian tradition production such as tomato chopped and rustic purée in “bio”. Indetermined plant, good vigor, good results both under green house and open field. Resist./Toll.: **V FF N TMV**.

ZUCHELLO

Olive shape mini tomato, “cocktail” category addressed to professional market. Vigorous plant, very high yield with long harvesting period. Fruits are 25 g average weight, very uniform and well set-up in clusters. Very intense flavor, brix of 7-8 degree. Uniform color, it can be harvested in cluster or single pick-up. Suitable for all cycles of the green house cultivation including the winter ones with excellent production and quality.

Resist./Toll.: **V FF N TMV**.

TANGERINO

Indetermined plant with good vigor, cherry type fruit for harvesting in cluster at complete ripening. Perfect round shape, average weight 20-25 g, excellent flavor. At complete ripening it reaches a deep uniform red color.

Having Nematode resistance it is suitable for green house biological cultivation. High lycopene content.

Resist./Toll.: **V FF N TMV**.

MONCHERRY

Very productive hybrid, with round fruits and average weight 15-20 g. Medium green color with light green shoulder and deep bright red at ripening. Clusters have 12-15 fruits, sometimes twin. Very typical sweet taste.

Indetermined, vigorous plant with good foliage, medium internodes, good production. “Medium shelf life”, good over ripening resistance and transportability.

Resist./Toll.: **V FF N TMV**.

DETERMINED

FAIR LADY

Determined hybrid, firm and vigorous plant, good cover and very high yield. Having the gene "RIN"- Long Shelf Life, its fruits are very firm and resistant to over ripening. Mid-season cycle.

Globe fruit shape lightly ribbed, average weight 200-250 g, deep red color at full ripening.

Being a LSL tomato it is suitable for long distances transportation.

Resist./Toll.: **V FF Aa.**

UG 8110

Determined hybrid tolerant to TSW virus. Globe fruit, lightly ribbed, average weight 200-250 g, deep red color when full ripening. Good fruit uniformity and resistance to over ripening grant long distances transportability and long storage. Compact vine, good cover and rustic plant, gives high yield and prolonged harvest. UG 8110 has a mid-early cycle. Can be grown in all temperate areas for late harvesting or out of season under plastic. Resist./Toll.: **V FF N Bsp TSWVt.**

EXCALIBUR

Determined hybrid, compact vine and good foliage cover.

Very uniform fruits thanks to Long Shelf Life gene, globe flattened shape.

Average weight over 250 g.

Excellent internal and external deep red color, multilocular fruits.

Very suitable hybrid for areas where the Tylc virus is present.

Resist./Toll.: **V FF N Tylc.**

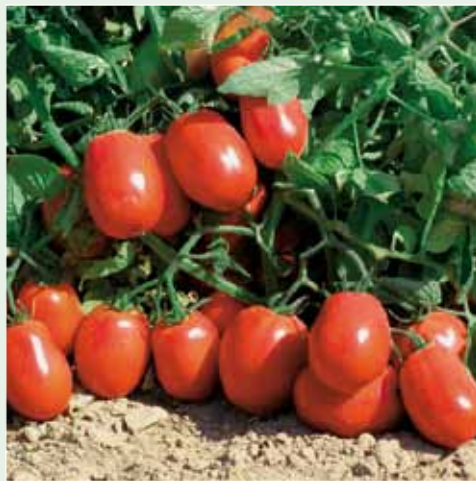

BIG RIO 2000

Hybrid of the "Saladette" / "Rio Grande" type. Determined plant with good vigor. Suitable for ground cultivation or on small stake.

Oval-square fruits, big size (120-150 g), very firm, excellent color at complete ripening. Very thick walls.

Due to its organoleptic qualities, BIG RIO 2000 is suitable both for fresh market and processing.

Resist./Toll.: **V FF N Bsp.**

SANDOKAN

This hybrid is TSW virus tolerant, determined plant, with good vigour and high production potential. Mid-early ripening.

Oval shape fruit, average weight 110-120 g. When ripening fruits are uniform red color, full and good thick walls.

Suitable both for fresh market and processing. SANDOKAN carries the S-5 gene responsible for the tolerance to TSWV.

Resist./Toll.: **V FF N Bsp TSWVt.**

GIGANTICO

This hybrid is a "Saladette" type with good size fruit, high resistance to over ripening. Early cycle. Determined plant, vigorous and rustic suitable for open field cultivation. Average weight of the fruit is 110-120 g and gets a deep red color at complete ripening. This hybrid grants a high production, very uniform, that can be used both for fresh market and processing. GIGANTICO has found a wide acceptance in many markets and in many geographical areas, for its wide adaptability and tremendous yields. It is a typical "dual purpose" tomato.

Resist./Toll.: **V FF N Bsp.**
