

UGI 1796 F1

Type

Indeterminate cylindrical/elongated shape tomato.

Cultivation

Suitable to all cultivation cycles under greenhouse both in conventional cultivation and on artificial substrate.

Cycle

Early.

Plant

Generative, airy, rustic with excellent production potential. Genetic resistances make this hybrid one of the few with such package and healthy plant.

Fruits

Typical elongated oval shape. Very deep green colour turning red at full maturity. In some cultivation conditions it can be harvested when completely red. Average weight 140-150 g.

Remarks

The plant requires an appropriate irrigation and nutritional inputs.

Resistances/Tolerances

HR*: ToMV/ToTV/VaVd/Fol:0-1

IR*: TSWV/TYLCV/On/MaMiMj
